Summary

Fullstack engineer with 5 years shipping production features end to end, with deep frontend ownership. Comfortable owning a module from prototype to tested, working software.

Experience

Senior Frontend-Leaning Fullstack Engineer, Delta Labs (2021-present)

- Owned the analytics dashboard module end to end: React + TypeScript UI, Node.js/Express API, and the underlying data pipeline, matching the Figma prototype pixel-for-pixel.
- Built and shipped 3 data-visualization views (charts, large tables) with performance tuning for datasets over 100k rows.
- Wrote tests for every feature as standard practice from day one (Vitest + React Testing Library on the frontend, Jest on the API) - treated as continuous regression, not an afterthought.
- Used AI/design-to-code tooling as a first pass, then verified every result against the prototype and design system before shipping.
- Joined story kickoffs, walked acceptance criteria and edge cases with the team before writing code.

Frontend Engineer, Nusantara Digital (2019-2021)

- Shipped fullstack features (React + Node.js) for an internal client-facing platform under a Technical Lead, with direct client-facing delivery responsibility.
- Implemented a shared design-system component library used across 4 product squads.

Skills

React, TypeScript, Node.js/Express, data visualization, design systems, Figma handoff, Vitest, Jest, performance tuning, clear written and verbal communication, cross-functional ownership.
