Summary

4 years of fullstack delivery on consulting engagements: React on the frontend, a Ruby on Rails API on the backend, owning features from client kickoff to production.

Experience

Fullstack Engineer, Kirana Consulting (2020-present)

- Delivered fullstack modules for enterprise clients: React (Vite) frontend, Ruby on Rails API, RSpec test suite written alongside every feature as standard practice.
- Owned the client-facing reporting dashboard: chart rendering, large sortable tables, and query performance tuning after a client reported slow load times on large accounts.
- Took ambiguous client requirements straight to a working prototype, then iterated with the Technical Lead and Product Designer until the build matched the Figma spec exactly.
- Comfortable being the point of contact on client calls - strong written and verbal communicator.

Junior Fullstack Developer, StartUp Cepat (2019-2020)

- Built CRUD features end to end across a React frontend and a Node.js API.

Skills

React, Vite, Node.js, Ruby on Rails, RSpec, data visualization, client-facing delivery, ownership mentality, design-to-code workflow, Figma.
