Summary

3.5 years as a frontend-leaning fullstack engineer. I go deepest on hard UI problems - design systems, dashboards - while still owning the API and data behind them myself.

Experience

Fullstack Engineer, Awan Teknologi (2021-present)

- Owned the internal design-system implementation in React + TypeScript, used across every squad in the company, built from Figma handoff with pixel-accurate states.
- Built a data-visualization dashboard (charts.js + a virtualized table) end to end, including its Node.js/Express API and its test suite (unit + integration, written unprompted).
- Ran story kickoffs with the Product Designer and Technical Lead to walk edge cases before writing any code, so the build matched the Definition of Done on the first pass.
- Known on the team for clear, proactive written updates and for flagging risk early.

Skills

React, TypeScript, Node.js, design systems, Figma, data visualization, automated testing, ownership, cross-functional communication.
